

## 5. The Triple Threat #3: 5G & Internet of Things

### Prep Exercise

This is another of the large sections of the workshop. Some of you may already be familiar with 5G (5th Generation) Telecommunications, but for those who are not I have worked to create an informative, introductory section on the scope of issues related to it.

- observe your neighborhood - streets/roadways to work or play and see how many towers you can find
- observe how many times you and your friends/family use and touch your phone/ computer/devices, and how many times you look up and around when on them
- be attentive to how your body feels before/during/after long phone use
- go to a restaurant/bar/store ... alone if comfortable and observe people on their devices; conversations (no need to listen in...just watch), where phones are placed on body etc
- discuss what friends/neighbors/coworkers/children/family know about 5G with them
- observe the number of adds/videos come up on your social media

### Q and A

- What is 5G?
- What is the IoT?
- How does 5G compare with 2 G - 4G?
- Who is profiting from 5G?
- Why and how was 5G accelerated during the pandemic?
- Two trillion dollars was allocated for 5G/Surveillance and this, through Operation Warp Speed. What was the other technology?
- Who are some of the primary entities behind the Great Reset?
- What is the Space Fence and why are we being told it's valuable?
- How does 5G/IoT impact insects, birds, and other animals?

- How does 5G/IoT impact children and humans?
- What will happen to a. humans, and b. the environment, if we do not stop 5G within the next two years?
