

Toxins Cause All Disease Syllabus v2 Presentation (328 slides)

1. Intro Interview With Dr. Levy
 - a. There is no disease without excess oxidation
 - b. There is no excess oxidation without the presence of toxins
 - c. There is no disease without new or ongoing toxin sources
 - d. Defining what a toxin is
2. Redox Biology & Vitamin C Fundamentals
 - a. Electrons & Sources
 - b. Vitamin C primarily serves to optimally distribute electrons, not serve as a source for new electrons
3. Toxic Nutrients (Calcium, Iron, Copper)
 - a. Elevated intracellular calcium is present in all diseased cells
 - b. Iron and copper fuel all new oxidative stress
 - c. Iron and copper RECYCLE and never should be supplemented
4. Prominent Sources of Toxins
 - a. Pathogen-generated toxins are the greatest source
 - b. Environmental sources (air, food, water) important as well
 - c. Poor gut health also a very significant source
5. The Interactions Between Vitamin C, Magnesium, Cortisol, Insulin, Thyroid hormone and Reproductive Hormones
 - a. Optimal interaction produces minimal oxidative stress
 - b. Cortisol and insulin both work to increase intracellular vitamin C levels
 - c. With normal intracellular vitamin C levels, the cell is normal
 - d. Minimal hypothyroidism maximizes oxidative stress everywhere
 - e. Low magnesium worsens all conditions
6. Oral Infection & Disease
 - a. Infected teeth, gums, and tonsils cause and worsen all conditions
 - b. All root canals are infected and increase all-cause mortality
 - c. Chronic pathogen colonization allows on-site toxin production in all diseased tissues
7. Heavy Metal Accumulation
 - a. Mercury from amalgam fillings have come home to roost, especially in the heart and brain
 - b. Plastic containers are a severe source of toxins (especially antimony)
 - c. Heavy metals are everywhere in your body, but especially in your heart
 - d. Heavy metal accumulations facilitate the preference of spike protein for the heart
 - e. Everyone needs to chelate on a regular basis
8. The Wonders of Hydrogen Peroxide
 - a. Nebulization often normalizes the worst gut problems
 - b. Powerful enough to work as a monotherapy for advanced COVID when nothing else available
 - c. HP naturally produced in the body and is the PERFECT antibiotic, leaving behind only water and oxygen after pathogens eradicated
9. Persistent Spike Protein Syndrome & Its Treatment
 - a. PSP syndrome now affecting many millions around the world
 - b. PSP always needs to be ruled out for any new patient with any symptom
 - c. D-dimer test must be routine
 - d. Bio-oxidative therapies mandatory

10. Epilogue – Final Thoughts From Dr. Levy
 - a. A “regular” dentist and a “regular” doctor are BAD for your health
 - b. A biological dentist and an integrative or orthomolecular doctor are GOOD for your health
 - c. You have to be proactive in educating yourself to find optimal care and help. Trust in traditional medicine and dentistry will only make you sicker and poorer with a shorter lifespan
 - d. Never see a doctor who won’t at least attempt to answer your questions. When questions are dismissed, don’t walk, but RUN out of that office

Notes.

- Title (1)

Redox Physiology & Vitamin C

- Reference checking (2)
- Redox medicine principles (3-12)
- Real role of antioxidants (13-20)
- Significance of ORAC (21-24)
- Source of all electrons (25-29)
- DHAA and CNS (30-31)
- Physiological goal of clinical protocol (32)
- Primary chronic disease promoters (toxin sources) (33-35)
- Primary treatment principles (36)
- Vitamin C fundamentals (37-81)

Prominent Sources of Toxicity

- Toxic nutrients (82-137)
- Magnesium fundamentals (138-156)
- Insulin, magnesium, and vitamin C (157-158)
- Inflammation, vitamin C deficiency, and hydrocortisone (159-163)
- Intracellular oxidative stress modulators (164-166)

Proper Augmentation of Antioxidant Impact

- Electron transport chain and ATP (167-170)
- Super 8 supplements (171-172)
- Hormones and oxidative stress (173-178)
- Cortisol, vitamin C, and oxidative stress relationship (179-199)
- Krebs, VC, glucose, and insulin hypothesis (200-204)
- Thyroid status and focal infections (205-207)
- Increased intracellular oxidative stress resolution (208)

Pathogens Generate All Toxins

- Sources of pathogen-generated toxins (209-243)
- Cancer and oxidative stress (244-248)
- The abscessed tooth and periodontal disease (249-260)
- Coronavirus and hydrogen peroxide nebulization (261-267)
- Chronic pathogen colonization (269-282)

- Persistent spike protein syndrome (283-314)
- Heavy metals and chelation therapy (315-321)
- Persistent spike protein protocol (322-326)
- Mark Twain (327)
- Contact information (328)
